AJJA 5000 Scaffold Tower

The AJJA 5000 is a lightweight, quick and easy to assemble scaffold tower system. They are ideal for indoor & outdoor access solutions, where a stable and secure platform is required.

The ladder frame construction combines increased strength and durability with the simplicity of a ladder.

The ladder positioned within the frame provides a safe and speedy access to the working platform, and incorporates ribbed tube for improved grip and user confidence.

Ideal for the construction, decorating and maintenance industries. These highly versatile towers provide strong working platforms at a variety of heights.

The 200mm castors have a load rating of 500kg, The lever locking action automatically centres the wheel under the upright for maximum stability. They are fully adjustable to level the scaffold system on uneven surfaces.

The braces are self locking spring loaded brace hooks which have a simple action so they can be locked into place in one simple operation. They are colour coded for easy identification.

The frames are manufactured from high strength aluminium. All joints are welded for maximum strength and durability.

High tensile spring pins lock the frames together preventing accidental dislodgement.

The platforms are aluminium sub frames with anti slip ply decking. Self locking platform hooks lock onto the cross member to prevent the platform from being dislodged. The platform has a hatch lid providing safe internal access.

Tested to the requirements of
AS/NZS 1576

Dimensions

Erected

Height	6000mm
Width	2500mm
Depth	1300mm

Platform Height

Height	5000mm
Reach	7000mm

Includes: 3 x H Frames, 3 x Ladder H Frames, 2 x Guardrail Frames, 6 x Horizontal Braces, 12 x Diagonal Braces, 1 x Plan Brace, 2 x Outriggers, 1 x set 8" adjustable castors, 1 x Platform, 1 x Hatch Platform, Toeboards.
